1. Healthcare Data Analyst (Junior)

Job Summary

A Healthcare Data Analyst (Junior) supports data collection, cleaning, analysis, and reporting to improve healthcare decision-making and patient outcomes.

Key Responsibilities

- Collect and clean healthcare datasets (patient records, billing data, etc.)
- Perform basic data analysis using Excel, SQL, or Python
- Create reports and dashboards for internal stakeholders
- Assist in identifying trends and patterns in healthcare data
- Ensure data accuracy and compliance with healthcare regulations

Requirements

- Bachelor's degree in Healthcare, Data Science, Statistics, or related field
- Basic knowledge of Excel, SQL, and data visualization tools

Skills

- Analytical thinking
- Attention to detail
- Basic statistical knowledge

---

2. Clinical Data Analyst

Job Summary

Analyzes clinical data from hospitals, labs, or clinical trials to support medical research and patient care improvements.

Key Responsibilities

- Analyze patient and clinical trial data
- Validate and clean clinical datasets
- Support research teams with data insights
- Generate reports on treatment outcomes
- Ensure compliance with clinical data standards

Requirements

- Degree in Life Sciences, Pharmacy, or Healthcare Analytics
- Understanding of clinical workflows and medical terminology

Skills

- Clinical data interpretation
- Knowledge of research methodologies
- Data validation techniques

---

3. Healthcare Reporting Analyst

Job Summary

Focuses on generating reports and dashboards for hospitals, insurance companies, or healthcare organizations.

Key Responsibilities

- Develop routine and ad-hoc reports
- Create dashboards using Power BI/Tableau
- Analyze KPIs like patient flow, revenue, and outcomes
- Automate reporting processes
- Communicate insights to management

Requirements

- Degree in Data Analytics, IT, or Healthcare Management
- Experience with reporting tools

Skills

- Data visualization
- Report automation
- Communication skills

---

4. Medical Data Analyst

Job Summary

Works with medical datasets to support healthcare providers in improving diagnosis, treatment, and operational efficiency.

Key Responsibilities

- Analyze medical records and treatment data
- Identify patterns in diseases and treatments

- Support clinical decision-making
- Ensure data privacy and accuracy
- Collaborate with healthcare professionals

Requirements

- Degree in Healthcare, Biology, or Data Analytics
- Basic understanding of medical terminology

Skills

- Data analysis
- Healthcare domain knowledge
- Problem-solving

---

5. Health Information Analyst

Job Summary

Manages and analyzes health information systems and patient data to ensure quality and compliance.

Key Responsibilities

- Maintain and manage patient health records
- Ensure data integrity and security
- Analyze health information for reporting
- Support healthcare IT systems
- Ensure compliance with healthcare laws (HIPAA, etc.)

Requirements

- Degree in Health Information Management or related field
- Knowledge of EHR/EMR systems

Skills

- Data governance
- Record management
- Attention to detail

---

6. Data Entry Analyst (Healthcare)

Job Summary

Responsible for entering, updating, and maintaining healthcare data in systems with high accuracy.

Key Responsibilities

- Input patient and medical data into systems
- Verify and correct data errors
- Maintain data confidentiality
- Organize and manage records
- Assist in basic data reporting

Requirements

- Any graduate (Healthcare background preferred)
- Basic computer and typing skills

Skills

- Fast and accurate typing
- Attention to detail
- Data validation

---

7. Public Health Data Analyst (Entry-Level)

Job Summary

Analyzes population health data to support public health programs and policies.

Key Responsibilities

- Collect and analyze public health datasets
- Track disease trends and outbreaks
- Support health policy development
- Prepare reports for government/public health bodies
- Work with epidemiological data

Requirements

- Degree in Public Health, Statistics, or Epidemiology
- Basic knowledge of public health systems

Skills

- Statistical analysis

- Research skills
- Data interpretation

---

8. EHR Data Analyst (Electronic Health Records)

Job Summary

Focuses on analyzing data from Electronic Health Record (EHR) systems to improve healthcare delivery.

Key Responsibilities

- Extract and analyze EHR data
- Ensure data accuracy and system efficiency
- Support EHR implementation and optimization
- Generate reports from EHR systems
- Collaborate with IT and clinical teams

Requirements

- Degree in Health Informatics, IT, or related field
- Familiarity with EHR/EMR systems

Skills

- Health informatics
- Data extraction and analysis
- System knowledge

9. Healthcare Data Analyst

Job Summary

Analyzes complex healthcare datasets to support clinical, operational, and financial decision-making.

Key Responsibilities

- Collect, clean, and analyze large healthcare datasets
- Develop dashboards and reports (Power BI/Tableau)
- Identify trends in patient care, costs, and outcomes
- Collaborate with clinical and administrative teams
- Ensure data accuracy and regulatory compliance

Requirements

- Bachelor’s degree in Healthcare, Data Analytics, or related field
- 2–4 years of experience in healthcare analytics

Skills

- SQL, Python/R
- Data visualization
- Healthcare domain knowledge

---

10. Senior Clinical Data Analyst

Job Summary

Leads clinical data analysis efforts to support research, treatment evaluation, and clinical trials.

Key Responsibilities

- Analyze complex clinical datasets and trial data
- Design data models for clinical research
- Ensure compliance with clinical standards (FDA, GCP)
- Mentor junior analysts
- Collaborate with physicians and research teams

Requirements

- Degree in Life Sciences, Pharmacy, or Data Analytics
- 3–5 years of clinical data experience

Skills

- Clinical research knowledge
- Statistical analysis (SAS/R)
- Data validation & compliance

---

11. Healthcare Business Analyst

Job Summary

Bridges the gap between healthcare operations and IT/data teams to improve systems and processes.

Key Responsibilities

- Gather and document business requirements
- Analyze workflows and recommend improvements
- Work with IT teams on healthcare system implementations
- Develop reports and dashboards
- Support decision-making with data insights

Requirements

- Degree in Business, Healthcare Management, or IT
- Experience in healthcare systems (EHR/EMR)

Skills

- Business analysis
- Stakeholder communication
- Process improvement

---

12. Population Health Analyst

Job Summary

Analyzes population-level data to improve community health outcomes and reduce healthcare costs.

Key Responsibilities

- Analyze epidemiological and population health data
- Identify high-risk patient groups
- Support preventive care strategies
- Develop population health dashboards
- Collaborate with public health teams

Requirements

- Degree in Public Health, Epidemiology, or Statistics

- 2–5 years of experience in health analytics

Skills

- Statistical modeling
- Public health knowledge
- Data interpretation

---

13. Quality Improvement Analyst (Healthcare)

Job Summary

Focuses on improving healthcare quality, safety, and compliance through data-driven insights.

Key Responsibilities

- Monitor healthcare quality metrics (KPIs)
- Analyze patient outcomes and safety data
- Identify areas for improvement
- Support accreditation and compliance processes
- Prepare quality reports for leadership

Requirements

- Degree in Healthcare Administration or Analytics
- Experience in quality improvement processes

Skills

- KPI tracking
- Process improvement (Lean/Six Sigma)
- Data analysis

---

14. Healthcare Operations Analyst

Job Summary

Improves hospital or healthcare facility operations using data analytics.

Key Responsibilities

- Analyze operational data (patient flow, staffing, resources)
- Optimize scheduling and resource allocation
- Identify inefficiencies and recommend solutions
- Support operational decision-making
- Collaborate with hospital management

Requirements

- Degree in Healthcare Management, Operations, or Analytics
- 2–5 years of relevant experience

Skills

- Operations analysis
- Data visualization
- Problem-solving

---

15. Revenue Cycle Data Analyst

Job Summary

Analyzes financial and billing data to optimize the healthcare revenue cycle.

Key Responsibilities

- Analyze billing, coding, and claims data
- Identify revenue leakage and inefficiencies
- Monitor key revenue cycle metrics
- Support process improvements in billing and collections
- Work with finance and coding teams

Requirements

- Degree in Finance, Healthcare, or Analytics
- Experience in medical billing/coding

Skills

- Revenue cycle management
- Data analysis
- Financial reporting

---

16. Healthcare Performance Analyst

Job Summary

Evaluates healthcare performance metrics to improve efficiency and patient outcomes.

Key Responsibilities

- Track performance KPIs across departments
- Analyze productivity and service quality
- Develop performance dashboards
- Provide insights for strategic planning
- Benchmark performance against industry standards

Requirements

- Degree in Healthcare Management or Analytics
- Experience in performance analysis

Skills

- KPI analysis
- Data visualization
- Strategic thinking

---

17. Healthcare BI (Business Intelligence) Analyst

Job Summary

Designs and manages BI solutions to provide actionable insights in healthcare organizations.

Key Responsibilities

- Develop and maintain BI dashboards and reports
- Design data models and data warehouses
- Integrate data from multiple healthcare systems
- Support data-driven decision-making
- Ensure data quality and consistency

Requirements

- Degree in IT, Data Science, or related field

- Experience with BI tools (Power BI, Tableau, SQL)

Skills

- Data modeling
- BI tools expertise
- SQL & ETL processes

---

18. Claims Data Analyst (Insurance)

Job Summary

Analyzes insurance claims data to detect trends, reduce fraud, and improve claims processing.

Key Responsibilities

- Analyze healthcare insurance claims data
- Identify fraudulent or suspicious claims
- Monitor claims processing efficiency
- Generate reports for insurance teams
- Ensure compliance with insurance policies

Requirements

- Degree in Finance, Insurance, or Healthcare Analytics
- Experience in claims processing or insurance analytics

Skills

- Claims analysis
- Fraud detection
- Data interpretation

19. Senior Healthcare Data Analyst

Job Summary

Leads complex data analysis projects, delivering actionable insights to improve clinical outcomes, operations, and financial performance.

Key Responsibilities

- Perform advanced data analysis on large healthcare datasets
- Design predictive models and analytical frameworks
- Lead end-to-end analytics projects
- Mentor junior analysts and review their work
- Communicate insights to senior stakeholders

Requirements

- Bachelor's/Master's in Data Science, Healthcare Analytics, or related field
- 5+ years of experience in healthcare data analysis

Skills

- Advanced SQL, Python/R
- Statistical modeling
- Leadership & mentoring

---

20. Lead Data Analyst (Healthcare)

Job Summary

Oversees a team of analysts and ensures delivery of high-quality data solutions aligned with organizational goals.

Key Responsibilities

- Lead and manage a team of data analysts
- Define analytics strategies and roadmaps
- Ensure data quality and governance standards
- Collaborate with cross-functional teams
- Drive data-driven decision-making across departments

Requirements

- Degree in Data Analytics, IT, or Healthcare
- 5–8 years of experience with team leadership exposure

Skills

- Team leadership
- Data governance
- Strategic thinking

---

21. Healthcare Analytics Manager

Job Summary

Manages analytics functions within a healthcare organization, aligning data initiatives with business and clinical goals.

Key Responsibilities

- Oversee analytics projects and teams
- Develop data strategies for healthcare improvement
- Manage reporting systems and dashboards
- Collaborate with executives and department heads
- Ensure compliance with healthcare regulations

Requirements

- Master’s degree preferred (Healthcare Management, Data Science)
- 6–10 years of experience

Skills

- Project management
- Healthcare domain expertise
- Stakeholder management

---

22. Healthcare Data Science Manager

Job Summary

Leads data science teams focused on advanced analytics, machine learning, and AI in healthcare.

Key Responsibilities

- Manage data scientists and ML engineers
- Develop predictive and AI-driven healthcare models
- Oversee deployment of analytics solutions
- Ensure ethical use of healthcare data
- Align AI initiatives with organizational strategy

Requirements

- Master’s/PhD in Data Science, AI, or related field

- 6–10 years of experience in analytics/data science

Skills

- Machine learning & AI
- Team leadership
- Advanced analytics

---

23. Director of Healthcare Analytics

Job Summary

Provides strategic leadership for all analytics initiatives within a healthcare organization.

Key Responsibilities

- Define and execute analytics vision and strategy
- Lead multiple analytics teams and departments
- Drive data-driven transformation initiatives
- Collaborate with executive leadership
- Manage budgets and resource allocation

Requirements

- Master’s degree (MBA, Healthcare Management, Data Science)
- 10+ years of experience

Skills

- Strategic leadership
- Business acumen
- Data governance & policy

---

24. Chief Data Officer (Healthcare Organization)

Job Summary

Executive-level role responsible for enterprise-wide data strategy, governance, and innovation.

Key Responsibilities

- Develop and implement enterprise data strategy
- Establish data governance and compliance frameworks
- Drive data-driven culture across the organization
- Oversee data security, privacy, and quality
- Collaborate with C-suite executives

Requirements

- Advanced degree (MBA, PhD, or equivalent)
- 12+ years of experience in data leadership

Skills

- Executive leadership
- Data governance & compliance
- Strategic vision

---

25. Head of Health Informatics

Job Summary

Leads the integration of healthcare data, technology, and clinical systems to improve patient care and operational efficiency.

Key Responsibilities

- Oversee health informatics systems (EHR/EMR)
- Lead digital transformation initiatives
- Ensure interoperability of healthcare systems
- Collaborate with clinicians and IT teams
- Drive innovation in healthcare technology

Requirements

- Degree in Health Informatics, IT, or Healthcare Management
- 8–12 years of experience

Skills

- Health informatics expertise
- System integration
- Leadership & innovation

26. Healthcare Data Scientist

Job Summary

Applies data science techniques to healthcare data to generate insights, build predictive models, and improve patient outcomes and operational efficiency.

Key Responsibilities

- Develop predictive and prescriptive models (disease risk, readmission, etc.)
- Analyze structured and unstructured healthcare data (EHR, imaging, claims)
- Build and validate machine learning models
- Communicate insights to clinical and business stakeholders
- Collaborate with IT, clinicians, and analysts

Requirements

- Master's/PhD in Data Science, Computer Science, or related field
- 3–6 years of experience in data science

Skills

- Python, R, SQL
- Machine learning algorithms
- Data visualization & storytelling

---

27. Clinical Data Scientist

Job Summary

Specializes in applying data science to clinical trials, patient data, and medical research to support evidence-based healthcare.

Key Responsibilities

- Analyze clinical trial and patient data
- Develop statistical and predictive models for treatment outcomes
- Ensure compliance with clinical standards (GCP, FDA guidelines)
- Work with researchers and healthcare professionals
- Interpret complex clinical datasets

Requirements

- Degree in Life Sciences, Biostatistics, or Data Science
- Experience in clinical research or healthcare analytics

Skills

- Clinical data analysis
- Statistical modeling (SAS/R)
- Domain knowledge in medicine

---

28. Healthcare Machine Learning Engineer

Job Summary

Designs, builds, and deploys machine learning models and systems for healthcare applications.

Key Responsibilities

- Develop and deploy ML models into production
- Build scalable data pipelines
- Optimize model performance and accuracy
- Integrate ML solutions with healthcare systems
- Monitor and maintain deployed models

Requirements

- Degree in Computer Science, AI, or related field
- Experience in ML engineering and deployment

Skills

- Python, TensorFlow, PyTorch
- MLOps & cloud platforms (AWS, Azure, GCP)
- Data engineering

---

29. AI Specialist in Healthcare Analytics

Job Summary

Leverages artificial intelligence technologies to solve complex healthcare problems and enhance decision-making.

Key Responsibilities

- Develop AI-driven solutions (NLP for clinical notes, imaging analysis)
- Implement deep learning models
- Collaborate with clinical and technical teams
- Ensure ethical AI usage and compliance
- Research and adopt emerging AI technologies

Requirements

- Master's/PhD in AI, Data Science, or related field
- Experience in healthcare AI applications

Skills

- Deep learning, NLP, computer vision
- AI frameworks
- Problem-solving

---

30. Predictive Analytics Specialist (Healthcare)

Job Summary

Focuses on forecasting healthcare trends and outcomes using advanced statistical and machine learning techniques.

Key Responsibilities

- Build predictive models (patient risk, demand forecasting)
- Analyze historical data to forecast trends
- Support preventive healthcare strategies
- Develop predictive dashboards
- Collaborate with stakeholders for implementation

Requirements

- Degree in Statistics, Data Science, or related field
- Experience in predictive analytics

Skills

- Predictive modeling
- Statistical analysis
- Data visualization

31. Healthcare Statistician / Biostatistician

Job Summary

Applies statistical methods to healthcare data for research, clinical trials, and policy-making.

Key Responsibilities

- Design and analyze clinical trials
- Apply statistical techniques to healthcare datasets
- Interpret and report statistical findings
- Ensure data validity and reliability
- Collaborate with researchers and public health experts

Requirements

- Master's/PhD in Statistics, Biostatistics, or related field
- Experience in healthcare or clinical research

Skills

- Statistical tools (SAS, R, SPSS)
- Research methodology
- Data interpretation

32. Clinical Research Data Analyst

Job Summary

Supports clinical research by collecting, analyzing, and interpreting data from clinical studies and trials.

Key Responsibilities

- Collect, clean, and validate clinical research data
- Analyze datasets from clinical trials and observational studies
- Generate reports for research teams and sponsors
- Ensure compliance with regulatory standards (GCP, FDA)
- Collaborate with researchers, clinicians, and statisticians

Requirements

- Degree in Life Sciences, Pharmacy, or Data Analytics
- 2–5 years of experience in clinical research or analytics

Skills

- Clinical data management systems (CDMS)
- SQL, Excel, SAS/R
- Attention to detail and regulatory compliance

---

33. Clinical Trials Data Manager

Job Summary

Manages the lifecycle of clinical trial data, ensuring quality, integrity, and compliance.

Key Responsibilities

- Design and manage clinical trial databases
- Oversee data collection, entry, and validation processes
- Ensure data accuracy and audit readiness
- Coordinate with clinical teams and CROs
- Maintain documentation for regulatory submissions

Requirements

- Degree in Life Sciences, Clinical Research, or related field
- Experience in clinical data management

Skills

- CDMS tools (Medidata, Oracle Clinical)
- Data governance
- Project coordination

---

34. Biostatistician

Job Summary

Applies statistical methods to analyze clinical trial data and support medical research.

Key Responsibilities

- Design statistical analysis plans (SAP)
- Analyze clinical trial and healthcare datasets
- Interpret statistical results and generate reports
- Collaborate with researchers on study design
- Ensure statistical validity and compliance

Requirements

- Master's/PhD in Biostatistics or Statistics
- Experience in clinical research preferred

Skills

- SAS, R, SPSS
- Statistical modeling
- Research methodology

---

35. Epidemiologist (Data-Focused)

Job Summary

Studies disease patterns and health trends using data to improve public health outcomes.

Key Responsibilities

- Analyze population health and disease data
- Track outbreaks and health trends
- Conduct epidemiological studies
- Support public health policy decisions
- Prepare reports for health authorities

Requirements

- Degree in Epidemiology or Public Health
- Experience in data analysis and research

Skills

- Statistical analysis
- Public health knowledge
- Data interpretation

---

36. Healthcare Outcomes Analyst

Job Summary

Evaluates the effectiveness of healthcare treatments and interventions using data analysis.

Key Responsibilities

- Analyze patient outcomes and treatment effectiveness
- Compare clinical interventions and therapies
- Support evidence-based healthcare decisions
- Develop outcome measurement frameworks
- Prepare reports for stakeholders

Requirements

- Degree in Healthcare, Public Health, or Analytics
- Experience in outcomes research or analytics

Skills

- Data analysis
- Clinical knowledge
- Reporting and visualization

---

37. Real-World Evidence (RWE) Analyst

Job Summary

Analyzes real-world healthcare data (EHR, claims, registries) to generate insights beyond clinical trials.

Key Responsibilities

- Analyze real-world datasets (EHR, insurance claims, registries)
- Generate evidence on treatment effectiveness and safety
- Support regulatory and market access decisions
- Collaborate with pharma, research, and healthcare teams
- Develop RWE reports and publications

Requirements

- Degree in Life Sciences, Epidemiology, or Data Analytics
- Experience in healthcare data analysis

Skills

- Data analysis (SQL, Python, R)
- Understanding of real-world data sources
- Research and reporting

38. Health Informatics Specialist

Job Summary

Bridges healthcare, data, and technology by managing and optimizing health information systems to improve patient care and operational efficiency.

Key Responsibilities

- Manage and optimize Electronic Health Records (EHR/EMR) systems
- Analyze healthcare data to improve workflows and outcomes
- Ensure data accuracy, privacy, and compliance
- Collaborate with clinicians, IT teams, and administrators
- Support digital health initiatives and system upgrades

Requirements

- Degree in Health Informatics, Healthcare IT, or related field
- 2–5 years of experience in healthcare systems

Skills

- EHR/EMR systems knowledge
- Data analysis & reporting
- Healthcare regulations (HIPAA, HL7, etc.)

---

39. Clinical Informatics Analyst

Job Summary

Focuses on improving clinical workflows and patient care by analyzing and optimizing clinical information systems.

Key Responsibilities

- Analyze clinical workflows and system usage
- Optimize clinical systems (EHR, lab systems, etc.)
- Support clinicians with data-driven insights
- Develop clinical reports and dashboards
- Train healthcare staff on system usage

Requirements

- Degree in Health Informatics, Nursing, or related field
- Experience in clinical environments

Skills

- Clinical workflow analysis
- Data visualization
- Communication & training

---

40. Healthcare Data Integration Specialist

Job Summary

Ensures seamless integration of data across multiple healthcare systems and platforms.

Key Responsibilities

- Integrate data from EHR, lab systems, billing, and other sources
- Develop and manage data pipelines (ETL processes)
- Ensure interoperability between systems
- Monitor data flow and resolve integration issues
- Work with APIs and healthcare data standards

Requirements

- Degree in IT, Data Engineering, or related field
- Experience with data integration tools

Skills

- ETL tools (Informatica, Talend)
- HL7, FHIR standards
- SQL & data engineering

---

41. EHR Implementation Analyst

Job Summary

Responsible for implementing, configuring, and supporting Electronic Health Record systems within healthcare organizations.

Key Responsibilities

- Assist in EHR system implementation and configuration
- Gather requirements from clinical and administrative teams
- Test and validate system functionality
- Train end-users on EHR systems
- Provide post-implementation support

Requirements

- Degree in Health Informatics, IT, or Healthcare Management
- Experience with EHR systems (Epic, Cerner, etc.)

Skills

- System implementation
- User training
- Problem-solving

---

42. Healthcare Data Architect

Job Summary

Designs and manages the overall data architecture for healthcare systems to ensure scalability, security, and efficiency.

Key Responsibilities

- Design data models, warehouses, and architecture
- Define data standards and governance policies
- Ensure secure and scalable data infrastructure
- Collaborate with IT and analytics teams
- Optimize data storage and retrieval systems

Requirements

- Degree in Computer Science, IT, or Data Engineering

- 5+ years of experience in data architecture

Skills

- Data modeling
- Cloud platforms (AWS, Azure, GCP)
- Database management

---

43. Health Information Systems Analyst

Job Summary

Analyzes and supports healthcare information systems to ensure efficient operations and data management.

Key Responsibilities

- Evaluate healthcare IT systems and workflows
- Troubleshoot system issues and improve performance
- Analyze system data for reporting and optimization
- Support system upgrades and maintenance
- Ensure compliance with healthcare standards

Requirements

- Degree in Health Information Management, IT, or related field
- Experience in healthcare IT systems

Skills

- System analysis
- Data reporting
- Technical troubleshooting

44. Healthcare Financial Analyst

Job Summary

Analyzes financial data within healthcare organizations to support budgeting, forecasting, and cost management.

Key Responsibilities

- Analyze financial statements, budgets, and forecasts
- Monitor healthcare costs, revenue, and profitability
- Identify cost-saving opportunities
- Prepare financial reports for management
- Support strategic financial planning

Requirements

- Degree in Finance, Accounting, Healthcare Management, or Analytics
- 2–5 years of experience in financial analysis

Skills

- Financial modeling
- Excel, SQL
- Analytical thinking

---

45. Medical Billing Data Analyst

Job Summary

Focuses on analyzing medical billing data to ensure accurate billing, coding, and reimbursement processes.

Key Responsibilities

- Analyze billing and coding data for accuracy
- Identify errors in claims and reimbursement processes
- Monitor billing KPIs and performance
- Support coding teams with data insights
- Ensure compliance with billing regulations

Requirements

- Degree in Healthcare, Finance, or related field
- Knowledge of medical coding (ICD, CPT)

Skills

- Billing systems knowledge
- Data analysis
- Attention to detail

---

46. Insurance Claims Analyst

Job Summary

Evaluates healthcare insurance claims to ensure proper processing, detect discrepancies, and reduce financial risks.

Key Responsibilities

- Review and analyze insurance claims data
- Identify claim denials and processing issues
- Detect fraudulent or suspicious claims
- Prepare claims analysis reports
- Collaborate with insurance and billing teams

Requirements

- Degree in Insurance, Finance, or Healthcare Analytics
- Experience in claims processing or insurance domain

Skills

- Claims analysis
- Fraud detection
- Data interpretation

---

47. Revenue Cycle Analyst

Job Summary

Analyzes the entire healthcare revenue cycle—from patient registration to final payment—to improve efficiency and profitability.

Key Responsibilities

- Monitor revenue cycle KPIs (denials, collections, AR days)
- Identify revenue leakage and inefficiencies
- Analyze billing, coding, and claims workflows
- Recommend process improvements
- Generate revenue cycle performance reports

Requirements

- Degree in Healthcare Management, Finance, or Analytics

- Experience in revenue cycle management

Skills

- Revenue cycle knowledge
- Data analysis
- Process improvement

---

48. Cost & Utilization Analyst (Healthcare)

Job Summary

Analyzes healthcare resource utilization and cost patterns to improve efficiency and reduce unnecessary expenses.

Key Responsibilities

- Analyze patient utilization data (hospital stays, procedures)
- Identify cost drivers and inefficiencies
- Support utilization management programs
- Develop cost optimization strategies
- Prepare reports for decision-makers

Requirements

- Degree in Healthcare, Economics, or Data Analytics
- Experience in healthcare analytics or utilization review

Skills

- Cost analysis
- Data modeling
- Healthcare operations knowledge

49. Public Health Analyst

Job Summary

Analyzes population health data to improve community health outcomes and support public health initiatives.

Key Responsibilities

- Collect and analyze public health datasets (disease trends, demographics)
- Monitor health indicators and identify risk factors
- Support public health programs and interventions
- Prepare reports for government and health agencies
- Collaborate with epidemiologists and policymakers

Requirements

- Degree in Public Health, Epidemiology, or Statistics
- 2–5 years of experience in health data analysis

Skills

- Statistical analysis (R, SPSS, Python)
- Data visualization
- Public health knowledge

---

50. Health Policy Analyst

Job Summary

Evaluates healthcare policies and provides data-driven recommendations to improve healthcare systems.

Key Responsibilities

- Analyze healthcare policies and their impact
- Conduct research on healthcare systems and reforms
- Use data to support policy recommendations
- Prepare policy briefs and reports
- Collaborate with government bodies and NGOs

Requirements

- Degree in Public Health, Public Policy, or Healthcare Management
- Experience in policy research or analysis

Skills

- Policy analysis
- Research and writing

- Critical thinking

---

51. Epidemiology Data Analyst

Job Summary

Specializes in analyzing disease patterns and epidemiological data to support public health decision-making.

Key Responsibilities

- Analyze disease surveillance and outbreak data
- Identify trends and risk factors
- Support epidemiological research studies
- Create dashboards and reports for health authorities
- Assist in disease prevention strategies

Requirements

- Degree in Epidemiology, Public Health, or Statistics
- Experience in epidemiological data analysis

Skills

- Statistical modeling
- Data interpretation
- Knowledge of disease surveillance systems

---

52. Healthcare Program Analyst (Government)

Job Summary

Evaluates and manages healthcare programs run by government agencies to ensure effectiveness and efficiency.

Key Responsibilities

- Analyze program data and performance metrics
- Monitor healthcare program outcomes
- Recommend improvements for public health programs
- Prepare reports for government stakeholders

- Ensure compliance with regulations and policies

Requirements

- Degree in Public Health, Healthcare Administration, or Analytics
- Experience in government or public health programs

Skills

- Program evaluation
- Data analysis
- Stakeholder management

---

53. Global Health Data Analyst

Job Summary

Analyzes international health data to address global health challenges and support multinational health initiatives.

Key Responsibilities

- Analyze global health datasets (WHO, World Bank, etc.)
- Monitor international health trends and disease patterns
- Support global health programs and research
- Collaborate with international organizations
- Prepare reports and insights for global stakeholders

Requirements

- Degree in Global Health, Public Health, or Data Analytics
- Experience in international health data analysis

Skills

- Cross-country data analysis
- Research and reporting
- Knowledge of global health systems

54. Digital Health Analyst

Job Summary

Analyzes data from digital health platforms (mobile apps, remote monitoring systems, health tech tools) to improve healthcare delivery and patient engagement.

Key Responsibilities

- Analyze user and patient data from digital health platforms
- Monitor app performance, engagement, and outcomes
- Generate insights to improve digital health solutions
- Collaborate with product and tech teams
- Support digital transformation initiatives

Requirements

- Degree in Health Informatics, Data Analytics, or IT
- Experience with digital health tools or platforms

Skills

- Data analytics & visualization
- Product analytics
- Understanding of digital health ecosystems

---

55. Telehealth Data Analyst

Job Summary

Focuses on analyzing telemedicine and virtual care data to enhance remote healthcare services.

Key Responsibilities

- Analyze telehealth usage, patient interactions, and outcomes
- Monitor virtual consultation performance metrics
- Identify trends in remote care delivery
- Optimize telehealth workflows and systems
- Provide insights for service improvement

Requirements

- Degree in Healthcare, IT, or Analytics
- Experience with telehealth platforms preferred

Skills

- Data analysis
- Remote healthcare knowledge
- Dashboard creation

---

56. Healthcare AI Analyst

Job Summary

Supports the development and evaluation of AI-driven healthcare solutions and analytics models.

Key Responsibilities

- Analyze AI model outputs and performance
- Work with data scientists to improve AI algorithms
- Evaluate healthcare AI use cases
- Ensure compliance with ethical AI standards
- Translate AI insights into actionable decisions

Requirements

- Degree in Data Science, AI, or Healthcare Analytics
- Experience with machine learning concepts

Skills

- AI/ML fundamentals
- Data interpretation
- Critical thinking

---

57. Patient Experience Analyst

Job Summary

Analyzes patient feedback and experience data to improve satisfaction and healthcare service quality.

Key Responsibilities

- Collect and analyze patient feedback (surveys, reviews)

- Measure patient satisfaction and experience metrics
- Identify service gaps and improvement areas
- Develop reports and dashboards
- Work with healthcare teams to enhance patient experience

Requirements

- Degree in Healthcare Management, Analytics, or related field
- Experience in customer/patient experience analysis

Skills

- Data visualization
- Communication & empathy
- Survey analysis

---

58. Healthcare Risk Analyst

Job Summary

Identifies and analyzes risks in healthcare systems related to operations, compliance, and patient safety.

Key Responsibilities

- Assess operational and clinical risks
- Analyze incident and safety data
- Develop risk mitigation strategies
- Ensure compliance with healthcare regulations
- Prepare risk assessment reports

Requirements

- Degree in Healthcare, Risk Management, or Analytics
- Experience in healthcare risk or compliance

Skills

- Risk analysis
- Data interpretation
- Regulatory knowledge

---

59. Fraud & Compliance Analyst (Healthcare)

Job Summary

Detects fraudulent activities and ensures compliance with healthcare regulations and standards.

Key Responsibilities

- Analyze claims and billing data for fraud detection
- Identify suspicious patterns and anomalies
- Conduct compliance audits
- Prepare investigation reports
- Work with legal and compliance teams

Requirements

- Degree in Finance, Healthcare, or Analytics
- Experience in fraud detection or compliance

Skills

- Fraud analytics
- Data mining
- Attention to detail

---

60. Wearable Health Data Analyst

Job Summary

Analyzes data from wearable devices (fitness trackers, smartwatches, medical wearables) to monitor health and wellness trends.

Key Responsibilities

- Collect and analyze wearable device data (heart rate, activity, sleep)
- Identify health patterns and anomalies
- Support preventive healthcare initiatives
- Collaborate with digital health and research teams
- Develop reports and dashboards

Requirements

- Degree in Data Science, Health Informatics, or related field
- Experience with IoT or wearable data preferred

Skills

- Data analytics
- IoT data understanding
- Visualization tools

---

61. Genomics Data Analyst

Job Summary

Analyzes genetic and genomic data to support personalized medicine, research, and diagnostics.

Key Responsibilities

- Analyze genomic datasets (DNA, RNA sequencing)
- Support research in genetics and precision medicine
- Interpret genetic variations and patterns
- Collaborate with researchers and clinicians
- Develop reports and insights

Requirements

- Degree in Bioinformatics, Genomics, or Life Sciences
- Experience in genomic data analysis

Skills

- Bioinformatics tools (BLAST, Bioconductor)
- Statistical analysis
- Domain knowledge in genetics

62. Freelance Healthcare Data Analyst

Job Summary

Works independently on short-term or project-based healthcare data analysis assignments for hospitals, startups, or consulting firms.

Key Responsibilities

- Collect, clean, and analyze healthcare datasets
- Create reports, dashboards, and insights for clients
- Work on diverse projects (clinical, financial, operational data)
- Communicate findings to non-technical stakeholders
- Manage multiple client projects and deadlines

Requirements

- Degree in Data Analytics, Healthcare, or related field
- Proven portfolio of analytics projects

Skills

- SQL, Excel, Python/R
- Data visualization (Power BI/Tableau)
- Client communication & time management

---

63. Healthcare Analytics Consultant

Job Summary

Provides expert advice to healthcare organizations on data-driven strategies, process improvement, and analytics implementation.

Key Responsibilities

- Assess client needs and define analytics strategies
- Analyze healthcare data to identify improvement opportunities
- Recommend solutions for cost reduction and efficiency
- Implement analytics tools and frameworks
- Present insights and strategic recommendations to leadership

Requirements

- Degree in Healthcare Management, Data Analytics, or MBA preferred
- 5+ years of experience in healthcare analytics

Skills

- Strategic thinking
- Consulting & stakeholder management
- Advanced analytics

---

64. Data Analytics Trainer (Healthcare Domain)

Job Summary

Trains students or professionals in healthcare data analytics, tools, and industry practices.

Key Responsibilities

- Develop and deliver training programs and workshops
- Teach tools like Excel, SQL, Python, Power BI
- Create course materials, assignments, and case studies
- Mentor learners and evaluate performance
- Stay updated with industry trends

Requirements

- Degree in Data Analytics or Healthcare
- Teaching/training experience preferred

Skills

- Teaching & communication
- Subject matter expertise
- Curriculum development

---

65. Healthcare Dashboard Developer

Job Summary

Specializes in designing and developing interactive dashboards for healthcare data visualization.

Key Responsibilities

- Design and develop dashboards (Power BI, Tableau)
- Integrate data from multiple healthcare sources
- Ensure dashboards are user-friendly and insightful
- Optimize dashboard performance
- Work with stakeholders to define reporting needs

Requirements

- Degree in Data Analytics, IT, or related field
- Experience in BI tools

Skills

- Data visualization
- SQL & data modeling
- UI/UX understanding

---

66. Remote Clinical Data Analyst

Job Summary

Works remotely to analyze clinical and healthcare data, supporting hospitals, research organizations, or CROs.

Key Responsibilities

- Analyze clinical trial and patient data
- Prepare reports and dashboards remotely
- Ensure data quality and compliance
- Collaborate with global teams virtually
- Support research and clinical operations

Requirements

- Degree in Life Sciences, Healthcare, or Data Analytics
- Experience in clinical data analysis

Skills

- Clinical data knowledge
- Remote collaboration tools
- Data analysis & reporting
